### Fractions

$$\frac{1}{2} \times 2 = \frac{2}{2}$$

# Fractions Wall

$$\frac{2}{5} + \frac{1}{5} = \frac{3}{5}$$

$$\frac{5}{8} - \frac{4}{8} = \frac{1}{8}$$

calculate fractions of quantities.

A

$$\frac{1}{3} \text{ of } 18$$

Use th

cul:

The first thing we do is divide 18 by 3 = 6.

The second thing we do is multiply the result by 1 --

$$6 \times 1 = 6$$

$$5 + \frac{1}{5} =$$

$$\frac{3}{6} + \frac{1}{6} =$$

$$\frac{2}{6} + \frac{3}{6} =$$

$$\frac{4}{7} + \frac{2}{7} =$$

$$\frac{6}{7} - \frac{3}{7} = \underline{\hspace{1cm}}$$

$$\frac{5}{8} - \frac{4}{8} = \underline{\hspace{1cm}}$$

$$\frac{7}{8} - \frac{3}{8} = \underline{\hspace{1cm}}$$

$$\frac{6}{10} - \frac{3}{10} = \underline{\hspace{1cm}}$$

What fractions are

equivalent to  $\frac{1}{2}$  ?

$$\frac{7}{8} - \frac{4}{8} =$$

$$\underline{\hspace{1cm}} - \underline{\hspace{1cm}} = \frac{7}{12}$$

Calculate the equivalent fractions of the following:

$$\frac{1}{5} = \qquad \frac{2}{6} =$$

$$\frac{1}{4} = \qquad \frac{6}{12} =$$

Calculate  $\frac{2}{3}$  and  $\frac{4}{9}$  of the following

$$27 = \qquad 36 =$$

$$45 = \qquad 54 =$$

Topic – PSHE

### **Creating a positive mind set**

#### **Scenario 1:**

There is a new pupil in your class. They feel a little nervous about being new to the school and are worried they will not make any friends. What can you do to help? How would you make them feel welcome?

#### **Scenario 2:**

You and your partner have just marked your mixed times tables test. You both had the same questions, but all of your six times tables are incorrect. Your partner has got full marks. You have started to think negatively about yourself. How can you change this with a positive mind set?

Look at the scenarios above and write your responses.
